- **Audience Profile**

The details of targeted audience

The name of this website is Code Learn and as shown from the name, it is for online tutorials section and is created for teaching how to make best designing, mobile-friendly, user-friendly and fully responsive websites with modern types of programming languages. This website is created for beginners and intermediates who want to learn making websites from beginning to the most degree which is a full web-developer. More specifically, college or university students who want to develop their web-skills as an independent learner. So my target audience is students from universities, colleges who study in the fields of, mostly, BIS and IT.

Reasons

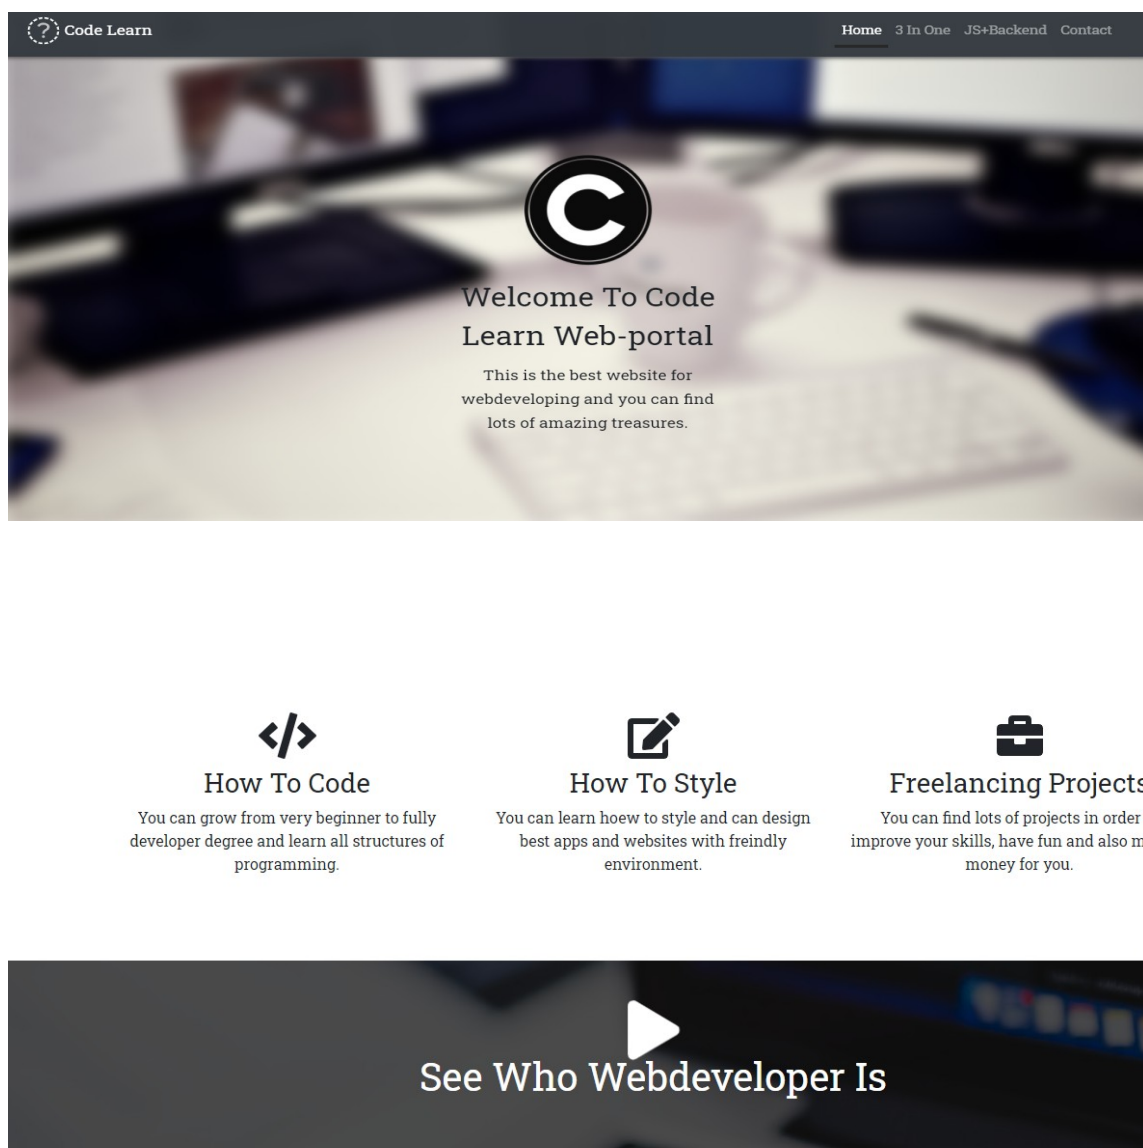

The reason why this theme was chosen is that most of IT students are learning lots of knowledge from www.youtube.com or some other social websites and it is one of the most popular themes among them. Nowadays, students tend to study learning more by themselves in the IT sphere because it is an easier and more helpful way to learn programming and there a lot of websites on the Internet to have this kind of opportunities for them. And some of them have lots of advertisements or other things to distract them. This is free of advertisements and gives them fully understanding of learning from beginning to advanced degree. This includes HTML 5, CSS 3, Bootstrap 4 and courses for making them for using online.

- **Functions and Features**

This website has four pages, which specifically are Home page, 3 In One page, JS+Backend page, Contact page and is responsive.

Home page

Home page has a navigation, showcase area, icon section, video showcase area, why section, donate section, sign-up section and footer section. For showcase area, there was used blur() function. For icon section, there was used fontawesome icons. For video showcase area, there was used parallax effect and transform-scale property. For why section, there was used collapse classes of Bootstrap. For donate section and sign-up, there was used a button and modal property. For footer, there were used social links and Aim of the Website section. Some pictures of home page:

Why This Website?

This is what makes you the best one of you in self-study area of webdeveloping. This gives you as many opportunities as that you want.
